MAINTENANCE

The Starter-kit includes all of the chemicals required to maintain your Drop Spa

It is important to maintain your jacuzzi to keep it clean and hygienic. Drop Spa has filtration and UV-system, which have an important role in the process.

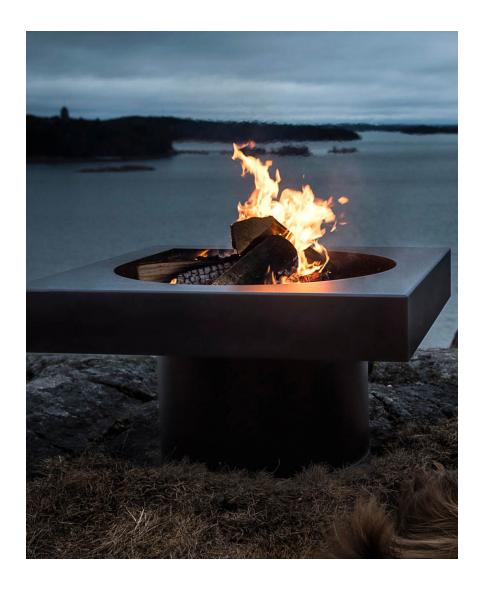

It is necessary to use the right chemicals to support the system. Drop Spa has a starter-kit which makes it easy for you to get started with the regular upkeep of the water.

Our web-shop makes it easy for you to get the chemicals you need to maintain your Drop.

DROP DESIGN FIRE

A uniquely versatile fireplace that can be used outdoors all year round

TECHNICAL SPECIFICATIONS

All you need to know about Drop Fire

Drop Design Fire is incredibly durable. The material is 3 mm thick cold-rolled steel which is surface-treated with high-temperature powder coating. The material of the ash pan is stainless steel. The interior of the table leg is heat-protected with mineral wool so the heat from the fireplace does not reach the leg and thus, the patio or other surfaces.

Drop Design Fire includes:

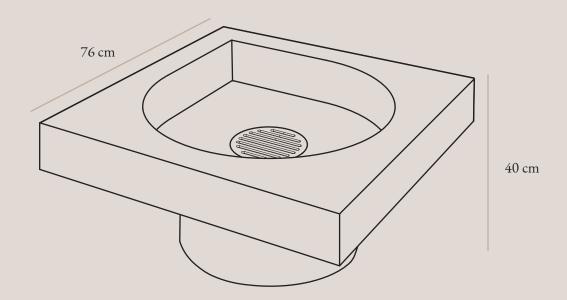

- A fireplace with a leg.
- A square cover for the fireplace that transforms the fireplace into a stylish table for the patio.

The product is delivered unassembled. A bioethanol burner is available as an additional feature for Drop Design Fire.

Additional Drop Design Bioethanol Burner

The bioethanol burner is a stainless-steel drop with a built-in ethanol container. The container's capacity is a maximum of 1.5 litres of ethanol. The container is filled from the edges of the drop or by lifting the drop by the cover and pouring the ethanol into the container. Design Fire burns for approximately 1.5 hours with 1.5 litres of ethanol.

Ethanol uses up a lot of oxygen when it burns, so make sure you have sufficient ventilation if using it in closed spaces. The fire is put out by putting the cover on.

MATERIAL HEIGHT Steel & Stainless Steel 40 cm COLOUR WIDTH Black 76 cm BURNING TYPE LENGTH Wood, coal or bioethanol 76 cm USAGE WEIGHT Outdoor and/or Indoor 60 kg
